

# End User Computing

## Virtualisation and mobility devices

BDS Solutions provide key design and deployment services to help NHS organisations effectively deploy mobility solutions. Whether managing an entire deployment or providing guidance on specific elements of your solution, BDS can provide the right team to ensure your users securely access the right facilities whilst on the move.

### Mobile Communications

Whether simply looking to publish a web application, enable mobile email using Exchange ActiveSync or deploying a comprehensive collaboration platform using Lync 2013, BDS can provide the deployment services to integrate reliably and securely with your infrastructure.

### Virtual Applications

Mobile devices come in many flavours and it is often impractical to physically install all applications that a mobile worker requires. BDS provide application packaging services, and the provision of infrastructure to deliver those packages, using Microsoft App-V and RemoteApp, VMware ThinApp or Citrix XenApp technologies as preferred.

### Virtual Desktop

Where nothing other than a full desktop will do to provide users with the experience they require, BDS provide options from Microsoft RDS, VMware Horizon Suite and Citrix XenDesktop Suite. From storage design and deployment through to the publication of production desktops, BDS will support your organisation through the entire project lifecycle.

*“The process of establishing requirements, organizing resources and communicating with users has been challenge enough. BDS ensured that the technical solutions required to meet the business requirements were delivered reliably when needed.”*
