

Infrastructure Services

Designing and deploying highly available and reliable IT infrastructure

Active Directory

Active Directory has long been the standard for controlling access to IT resources. The design, implementation and management of Active Directory is key to the reliability and performance of the whole IT estate. BDS will help you establish and maintain a healthy directory service for your organisation.

Networking

In a world where your service is as good as the connection to it, effective network configuration is key. BDS provides advice on ensuring the directory and network configuration complement the needs of the users whether LAN-based, wireless or remote.

Provisioning

Establishing methods for using personnel data to manage access to internal systems has long been an objective of many NHS organisations. BDS produce and supply Directory Manager™ that enables ESR to be used as the data source that creates, updates and expires user accounts in Active Directory.

Self-Service

Enabling departments and users to contribute to the maintenance of the directory is a key objective for many IT teams. To relieve the pressure on IT services, BDS provide self-service password reset software and a user update web portal. Routine procedures can be undertaken via electronic workflows saving significant IT resources.

Security

Ensuring data is secured is a fundamental IT goal. Controlling access, permissions and encryption in the evermore complex infrastructure is a challenge. BDS consultants will recommend and implement gateway, compliance and device management technologies that will keep computers and data protected.

Transformation

NHS restructuring has meant a great deal of change to organisations and the way IT services are delivered to users. BDS help organisations manage the process of transformation by establishing and executing migrations, assuring the continuity and future manageability of IT resources.

“BDS Solutions are a great company to work with. They understand the challenges and needs of a busy dynamic health care organisation like ours.”
