Remote Access

DirectAccess

DirectAccess allows remote users to securely access internal network file shares, websites and applications without connecting to a VPN. DirectAccess establishes bi-directional connectivity with an internal network every time a DirectAccess-enabled computer connects to the internet, even before the user logs on. Users never have to think about connecting to the internal network and IT administrators can manage remote computers outside the office, even when computers are not connected to the VPN.

Threat Management Gateway (TMG)

Microsoft Forefront Threat Management Gateway 2010 is a secure Web gateway that enables employees to use the Internet safely and productively without worrying about malware and other threats. To help block the latest Web-based threats, it provides multiple layers of continuously updated protections including URL filtering, malware inspection and intrusion prevention. BDS Solutions has a dedicated team of qualified technical consultants specialising in ensuring customers minimize their security risk by planning and deploying TMG 2010 in a way that fits their particular business needs.

Unified Management Gateway (UAG)

Microsoft Forefront Unified Gateway (UAG) is a piece of server side software which provides secure access to corporate networks, systems and applications. It incorporates a number of different access technologies including VPN, HTTP reverse proxies and the Microsoft-developed technology DirectAccess. Remote clients can access this corporate resource through a special website that is hosted on an IIS server which is bound to the UAG software.

Citrix NetScaler

All-in-one web application delivery controller (ADC) that makes applications run up to five times faster, cuts web application ownership costs with server offloading and makes sure that applications are always available with its application load balancing capabilities. NetScalers are available as a physical appliance or software appliance and features a pay-as-you-grow software model.

"Today's mobile challenges for NWAS workforce has just become much easier to manage through the recommendations of BDS. After having a conversation with our account manager around the workforce having mobile technology available to them in order to access information securely whilst being mobile, BDS provided NWAS with a solution that was cost effective and delivered in a very short time. This has transformed the way that our workforce are able to have the right information available at the right time. Having a company like BDS that understands the NHS data security policy's has been a valued asset to our Trust."

Richard Done, Data Centre Manager

North West Ambulance Service NHS Trust
